SUZUKI C-10 COLOR DISPLAY

The New Suzuki Color Display is a LED high resolution screen that has very sharp, crisp lines and is extremely easy to read. It has a bonded glass front screen so whether it be sun, salt, or UV rays, your screen will never blur or fade like a plastic cover. The C-10 has its mounting points in the front so there is no need to crawl under your console to mount it. It connects to Suzuki's digital harnesses with one easy connection. Save your favorite programming and update the display using the Mini USB port. The C-10 is able to monitor functions such as RPM, Speed*, Water Pressure*, Fuel Level*, Fuel Consumption, Coolant Temperature, Oil Level, Oil Temperature, Trim Level, Hours, or Volts (* additional sensors required). The C-10 is able to monitor up to 2 engines simultaneously. The Suzuki C-10 can be retro fitted, to replace a 4" round gauge.

Benefits

- Bright, full color 320 x 240 LED screen makes it easier to see menus and screen detail in both full sunlight and night operation
- Fits standard 3 3/8" gauge cutout
- Displays data for one or two engines per gauge
- Preconfigured pages or create your own
- Micro USB for software updates (update cable required)
- Power and data through single NMEA 2000 micro-C connector
- Low profile front mount - 8mm of dash (rear mount option for "glass dash" installations)

Suzuki C-10 Cover

This cover protects the Suzuki Color Display (C-10) from the elements. Use the cover to extend the life of your Suzuki C-10 color gauges.

34200-93J32	Without monitor functions

4" Tachometer With Suzuki Troll Mode Scale

Easy to read 4" Tachometer has a scale from 0-7,000 RPM for standard use and a secondary scale from 0-3,000 RPM with markers at 50 RPM intervals for use with the Suzuki Troll Mode System. Gauge also includes warning lamps for Engine Temperature, Low Oil, Check Engine, and Over-Rev. When in Troll mode, Over-Rev Lamp stays on to indicate that Troll mode has been engaged. The secondary RPM scale is designed to make setting and maintaining a lower troll speed simple. Fits DF40A/50A/50AV/60A/60AV/70A/90A/115A/140A (DF300 requires C-10 gauges) *See engine owner's manual for information about Suzuki Troll Mode system. Not all models come equipped with trolling mode system. Accessory Troll Mode Switch is required for Suzuki Troll Mode System use. Suzuki recommends the use of this gauge for trolling use.

SUZUKI ANALOG INSTRUMENTS

Suzuki Genuine Instruments are custom-designed to provide the quality, reliability and value you expect from Suzuki Products. The wide selection allows you to accurately monitor a variety of essential functions. All instruments are lighted for night time boating and feature standard 2" and 4" diameters for easy installation.

4" Tachometers

7,000 max RPM Tachs are available with or without 4-Stroke monitor functions. Monitor functions include: Low Oil Pressure Warning, Engine Temperature Warning, Check Engine Warning and Over-Rev Limit Warning.

34200-93J00	with monitor functions
34200-93J20	without monitor

4" Tachometer With Suzuki Troll Mode Scale

Easy to read 4" Tachometer has a scale from 0-7,000 RPM for standard use, and a secondary scale from 0-3,000 RPM with markers at 50 RPM intervals for use with the Suzuki Troll Mode System*. Gauge also includes warning lamps for Engine Temperature, Low Oil, Check Engine and Over-Rev. When in troll mode, Over-Rev lamp stays on to indicate that Troll mode has been engaged. The secondary RPM scale is designed to make setting and maintaining a lower troll speed simple. *See engine owner's manual for information about Suzuki Troll Mode system. Not all models come equipped with trolling mode system. Accessory Troll Mode Switch required for Suzuki Troll Mode System use. Suzuki recommends the use of this gauge for trolling use.

Propeller selection is very important in the performance of your boat. Acceleration, speed, fuel efficiency, stability and engine RPM all are affected by the propeller selected. Operating requirements and conditions will also affect which design, style and pitch of propeller you may choose to meet your individual needs. The boat and engine combination may have already been tested by your dealer or the boat manufacturer for the appropriate propeller size. Your Suzuki Dealer can assist you with the process to determine the correct propeller for your application.

Stainless Steel Propellers

Suzuki Stainless Steel Propellers offer higher performance and greater durability than aluminum propellers. The aggressive design of these propellers enhances the overall performance of your boat and the durability of the stainless steel construction will give you long term dependability. Your Suzuki Stainless Steel propeller is also fitted with a rubber cushion hub to help absorb vibration and shock should you strike a foreign object.

Propeller Sizing

When referring to propeller size, such as 3 x 13 x 18, the first number indicates the number of blades, the second number details the diameter of the propeller in inches and the third number is the pitch of the propeller in inches. The pitch is the most significant number in the description. The diameter is usually predetermined by the propeller engineers and is based on the size and series of the engine.

Diameter

Diameter is considered to be the distance across an imaginary circle that is made when a propeller is rotated. Diameter is determined during the engineering process of designing a propeller and is usually based on requirements to meet the needs of engine size, gear case design, horsepower and speed.

Pitch

Pitch is used to describe the theoretical distance that a propeller “cork screws” through the water in inches of forward travel. In theory, an 18” pitch propeller would move ahead 18” with each complete revolution of a propeller. There is always some percentage of inefficiency as water conditions, boat weight and propeller style are introduced into the performance equation. The lower the “slip factor,” the more efficiently the propeller will perform and the faster the speed at a given engine RPM. Lower pitches accelerate faster, but have a lower top end speed. Higher pitches have a slower acceleration, but may attain higher top speeds. An inch of pitch generally is equal to 150 – 200 engine RPM at wide open throttle (WOT). If pitch is increased by an inch, RPM will decrease by 150 – 200 RPM at WOT. If pitch is decreased by an inch, RPM will increase by 150 – 200 RPM at WOT. Always operate your boat/engine combination within the recommended RPM range guidelines as stated in your operator’s manual. Operating outside the recommended range can cause severe damage to your engine and may void the engine warranty.

Propeller Cup

Cup is used to reduce the slip and ventilation of the propeller. This will allow you to operate your engine at a higher transom mounting and allow you to use more trim for bow lift. The cup refers to the area along the trailing edge of the propeller blade that has an increased pitch in the last 1/2” of the blade surface and extends to the blade tip.

Rake

Rake is described as the angle, in degrees, that the propeller blades are mounted to the “barrel” of the propeller. The blades of a zero degree rake propeller are mounted perpendicular to the “barrel” of the propeller. The blades of a higher rake propeller angle more to the rear of the propeller. A propeller with a high rake design will hold the water on the blades longer during operation and will ventilate less at higher engine heights. High rake propellers will produce higher thrust that will help lift the bow of the boat more effectively.

Propeller Lock

Theft protection for your boat’s propeller, in and out of the water. Constructed of naval brass and stainless steel for long life. Easy to install. Also fits counter rotation models.
